

Effect of Biozyme Crop+ on Sugarcane

Key Results

	Treated	Control
Yield (mt/ha)	90.96	82.20
Com.Cane Sugar(mt/ha)	11.07	9.47
Plant Population('000/ha)	82.64	75.94

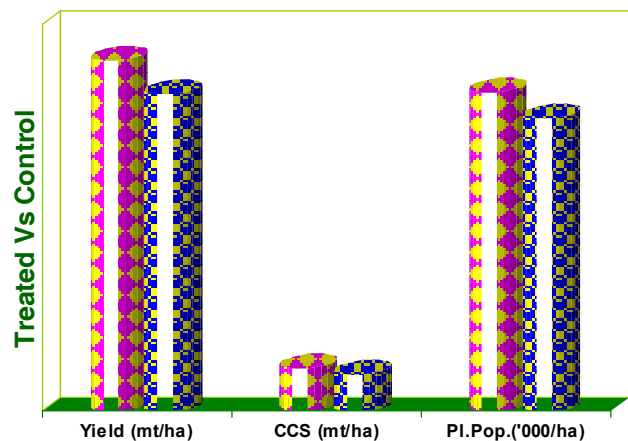

PROTOCOL

Crop	: Sugarcane
Variety	: COC 671
Institute	: Deccan Sugar Institute, Pune, Maharashtra
Product	: Biozyme Crop+
Applications	: @ 1 Ltr / ha - in two splits.

Researchers' Conclusion

The results for yield and commercial cane sugar in mt / ha were highly significant, while for plant population (matured canes) at harvest were non-significant indicating that there was increase in cane weight and sugar recovery.
