

Envomin™

Complete balanced mineral supplement with growth promoter

Envomin™ provides such micronutrients which are favourable to build up the disease resistance and immune response. Envomin™ provides mineral mixtures which are easily digestible by Fishes / Shrimps. The available form of essential nutrients in Envomin™ improves digestion, absorption, leading to faster growth rate and High weight gain. Envomin™ optimizes FCR and maximizes productivity. It also provides proper ratio of calcium & phosphorus for the development of perfect endo and exo-skeletal system of Fishes / Shrimps. It provides sufficient nutrients that support the development of plankton. Envomin™ provides essential amino acids which helps in protein synthesis.

Benefits:

- Better digestibility and disease resistance
- Helps to develop immune response and defense mechanism
- Regulates osmoregulation
- Provide quality brood stock development
- Optimizes FCR and maximizes productivity
- Enriches pond water by developing plankton
- Maintain pH of pond water

Composition :

Complex mixture of essential micronutrients in inert form with Calcium, Phosphorous, Sodium and Potassium. Enrich with Amino Acids and high quality growth promoters.

Field trial results

An experiment was carried out in Catla and Rohu treated with Envomin™ and it was found that better growth and RNA : DNA ratio in treated fish than control fish. The graphical representation of results are given in Figure-1 & Figure-2.

Figure -1:

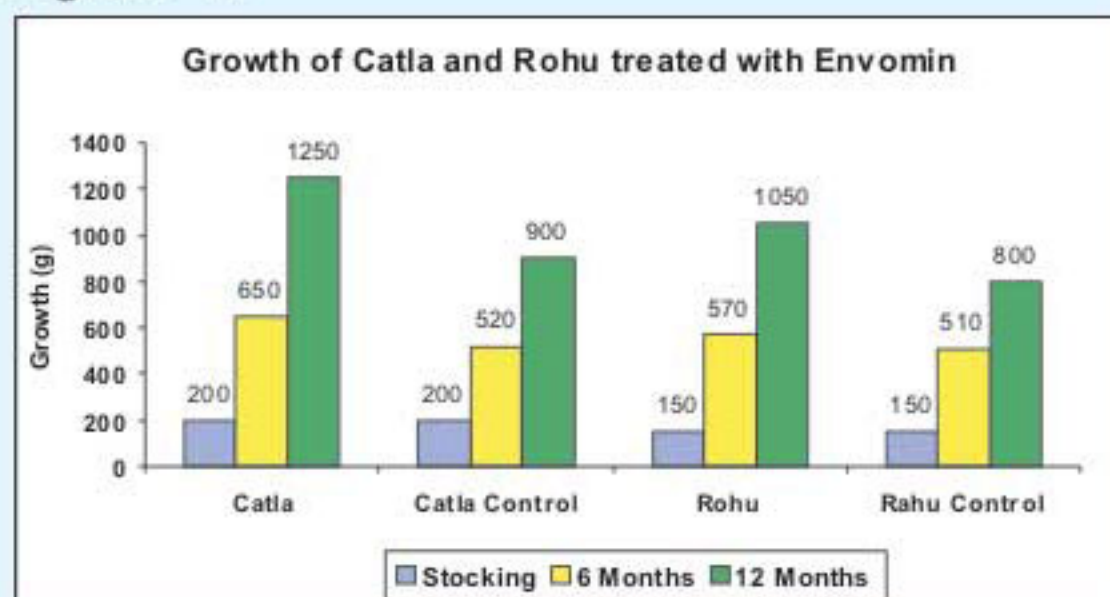

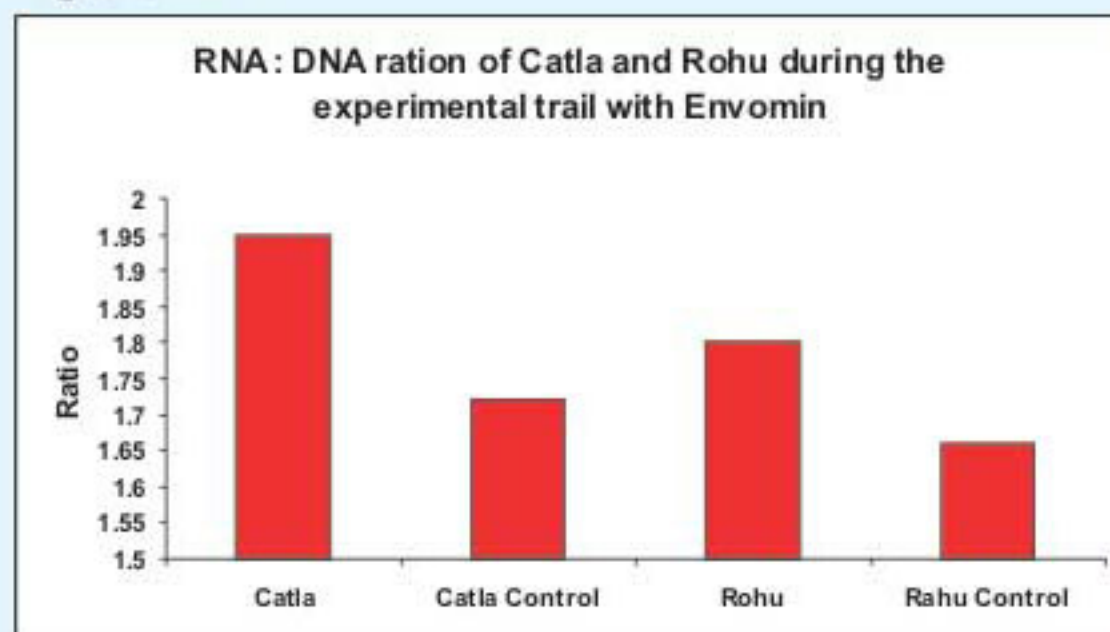

Figure -2 :

RNA : DNA ratio is known to provide dependable indication of growth trend (Buckley, 1980; Bandyopadhyay *et al.*, 2005). The ratio was greatest in the fish fed with Envomin™ because of higher dietary utilization and better growth.

Dosage:

10g/Kg of feed for prevention
 15g/Kg of feed for treatment
 For pond preparation 25 Kg/Acre
 (1 meter water depth)

Presentation:

10 Kg HDPE lined sack
