

Effect of Biozyme Crop+ on Mustard

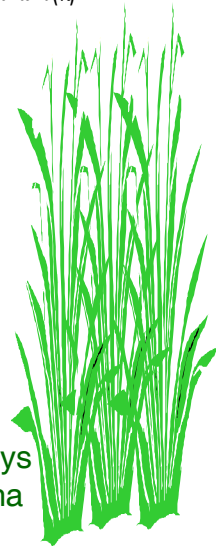

Key Results

	<i>Treated Control</i>	
<i>Year 1992-93</i>		
Seed yield (q/ha)	18.2	14.8
Oil content (%)	39.8	38.5
<i>Year 1993-94</i>		
Seed yield (q/ha)	17.7	13.7
Oil content (%)	40.8	39.1

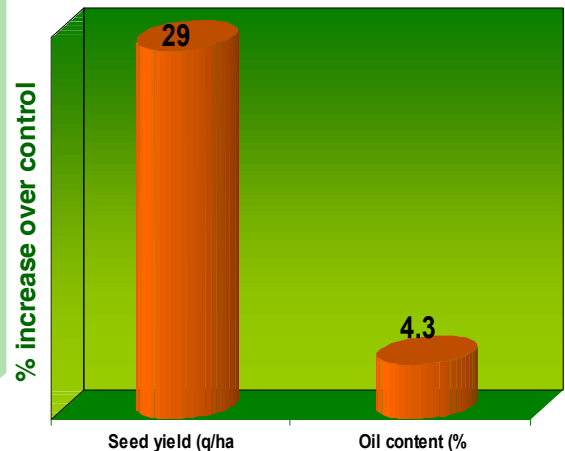

PROTOCOL

- Crop : Mustard
- Institute : GB Pant Uni., Pant Nagar, UP, India
- Product : BiozymeCrop +
- Applications : Three - I- @ 150ml/ha before flowering II - @ 150 ml/ha 15 days after first spray + III - @ 150 ml/ha 15 days after second spray with recommended doses of fertilizers.

Conclusion

Three applications of Biozyme Crop+ at equal doses of 150 ml/ha achieved 26% average increase in yield over non Biozyme used plot. The net profit over control (only recommended dose of fertilizer) was Rs. 8200/- per hectare. No phytotoxic symptoms of Biozyme were appeared on crop during the study.
