

Effect of Biozyme Crop+ on Tea

Key Results

	Treated	Control
Effect on yield		
mature tea seedlings(mt/ha)	2586	2245
clonal tea (china)(mt/ha)	2791	2652
clonal tea(assam)(mt/ha)	2644	2343
Effect on pruning recovery		
bud break(no/5 bushes)	357	292
shoots tipped (no/5 bushes)	192	166
wt.of tipped shoot (kg)	1.33	1.07

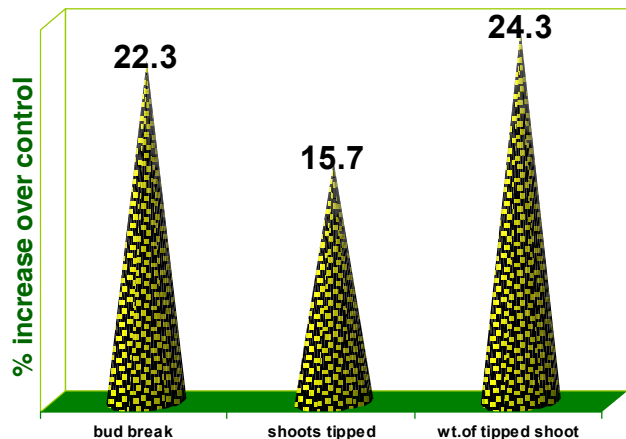

PROTOCOL

Crop	: Tea
Institute	: UPASI Tea Research Inst., Valparai, T.N., India
Product	: Biozyme Crop+
Applications	: @ 1 ml / ltr water

Researchers' Conclusion

The results indicate that foliar application of Biozyme Crop+ at 1000ppm at commencement of peak flushing effects crop promotion, the magnitude of crop increases which varies with cultivars, seasons, year of prune and productivity of the yield. No quality deterioration of made tea was noticed due to the application.
